

(参考)

VOCを排出している施設の主な類型(例)

<p>1. 塗装関係施設</p> <p>例：塗装ブース</p> <p>ブース排気</p>  <p>排気</p> <p>塗装ブース</p> <p>湿式排ガス洗浄</p> <p>Detailed description: A schematic of a painting booth. A car is shown being painted. Red arrows indicate exhaust air being drawn from the booth and sent to a wet scrubbing system. A blue arrow shows the flow of air through the scrubbing system. A green fan is shown at the intake of the scrubbing system.</p>	<p>2. 接着関係施設</p> <p>例：接着剤のロールコーターの乾燥施設</p>  <p>接着剤</p> <p>コーターヘッド</p> <p>乾燥チャンバー</p> <p>繰り出し</p> <p>巻き取り</p> <p>Detailed description: A schematic of an adhesive roller coating and drying facility. It shows a roller coating head applying adhesive to a substrate, followed by a drying chamber, and finally a winding mechanism.</p>
<p>3. 印刷関係施設</p> <p>例：グラビア印刷</p>  <p>乾燥施設</p> <p>インフィード 部</p> <p>アウトフィード 部</p> <p>前給部</p> <p>1色目印刷部</p> <p>2色目印刷部</p> <p>巻取部</p> <p>Detailed description: A schematic of a gravure printing facility. It shows the flow of material through various stages: infeed, printing (1 and 2 colors), and outfeed. A drying facility is indicated above the printing stages.</p>	<p>4. 化学製品製造関係施設</p> <p>例：樹脂乾燥器</p>  <p>ガス排出口</p> <p>冷却媒体 (水) (回収)</p> <p>製品 + 同伴溶媒</p> <p>乾燥用ガス</p> <p>乾燥器</p> <p>樹脂乾燥器</p> <p>製品</p> <p>Detailed description: A schematic of a resin drying facility. It shows a resin drying chamber where resin and solvent are dried using drying gas. The resulting product and solvent are collected, and the drying gas is cooled and recycled. A gas outlet is also shown.</p>
<p>5. 工業用洗浄関係施設</p> <p>例：洗浄槽</p>  <p>排気</p> <p>排気</p> <p>コンベア</p> <p>乾燥施設</p> <p>洗浄槽</p> <p>Detailed description: A schematic of an industrial cleaning tank. It shows a conveyor belt moving items through a cleaning tank and then to a drying facility. Exhaust air is shown being drawn from the cleaning tank and the drying facility.</p>	<p>6. VOCの貯蔵関係施設</p> <p>例：固定屋根式タンク</p>  <p>受け入れによる液面上昇による排出 (受け入れロス)</p> <p>日中の気温差による排出 (呼吸ロス)</p> <p>Detailed description: A schematic of a fixed-roof storage tank. It shows two scenarios of VOC emissions: one due to liquid level rise from filling (acceptance loss) and another due to temperature differences during the day (breathing loss).</p>
